

Ideas for Supporting Maths

St Joseph's Catholic Primary School

A difficulty with maths is known as dyscalculia but a child who is dyslexic might also have problems in this area.

Difficulties at Primary

- Learning the vocabulary of maths
- Confusion with signs such as + and \times or – and \div
- Confusion with 6 and 9 or with 2 and 5
- Difficulty in memorising multiplication tables
- Directional confusion in calculations such as subtraction
- Directional confusion with tables such as bus/train timetables
- Sequencing – writing 18 as 81 or 29 as 92
- Place value
- Difficulty with mental arithmetic because of short term memory difficulties
- Difficulty with understanding a question which involves words

How to Help

- Help with the vocabulary. Sometimes there is more than one expression for the same thing which can be confusing - for example 'subtract', 'take away', 'minus'
- Give as much practical experience as you can. For example, with money, use real coins to increase practical understanding and experience
- Use concrete examples to illustrate ideas. Building a tower of bricks helps with counting. Cutting a cake or pizza into portions helps with fractions
- Help raise awareness of direction, for example, working from right to left for addition. Tables might have to read from both top to bottom and from left to right
- Talk about numbers – TV Channels, dates, birthdays, house numbers, page numbers, phone numbers
- Count when skipping, scoring goals, climbing stairs (then try doing this two at a time)
- Use children's games to work on numbers. For example Connect 4, dominoes, board games such as Snakes and Ladders (great for counting forwards from different numbers, and not just from 1)
- Use terminology used in maths, including the same, more than, less than, how many, how many more

- Time – discuss the concepts of time in different ways, for example, day and night, early and late
- Make games such as ‘pairs’ with cards to help match symbols
- Encourage them to help with things like cooking – using weighing and measuring. By putting these skills into practical ‘real life’ tasks, it can aid understanding.

Useful websites on dyscalculia

- www.mathematicalbrain.com. This is the website of Brian Butterworth, who is the UK's leading expert on dyscalculia. Updates on the latest research, and links to resources.
- www.dyscalculiaforum.com. This is a great new site designed to spread the word about dyscalculia via a global discussion forum.
- www.dyscalculia.org. The author of this site is a US special educator, Renee Newman. It contains many useful links to for teachers and for those in the US.
- [The Dyscalculia Centre](#). This site, sponsored by the publisher First and Best in Education Ltd, has links to resources for parents and teachers.
